PATIENT INSTRUCTIONS

Gastroscopy

A gastroscopy is an examination of the oesophagus, stomach and part of the small intestine. Gastroscopy is a safe procedure that provides information other tests may not be able to give. It is performed by using a device called a gastroscopy, which is a thin tube that is inserted via the mouth. All patients will have a mouth guard to protect their teeth.

Colonoscopy

A colonoscopy is an examination of the colon or large intestine (bowel). Colonoscopy is a safe procedure that provides information on the lining of the colon. It is performed by using a device called colonoscope, a thin tube which is inserted via the anal opening. Prior to performing a colonoscopy, the colon has to be cleared of all faecal material using a combination of laxatives called bowel preparation.

These procedures are normally done in theatre or a procedure room. It is done under sedation, therefore all patients will have to fast for at least 6 hours prior to the procedure. Both these procedures are performed as a day procedure, so you will be going home on the same day.

It is important to remember that you **have** someone to take you home afterwards. If you have any questions or concerns, please do not hesitate to contact one of our friendly staff at Complete Gastro Health.
